

# Labotek system solution a perfect fit for Sunshine Plastics

OCTOBER 2008

Sunshine Plastics are plastic injection moulders operating since 1978 on the Sunshine Coast, Queensland. In 2008 Sunshine Plastics installed a Labotek central materials handling system incorporating a desiccant dryer to service their higher output machines.

“ We were looking towards bulk material supply which meant a central material feed system and the Labotek system offered by Fleming Plastics Dynamics was very impressive in terms of quality vs price. Being located relatively remotely from most machinery suppliers, we always favour suppliers that offer a high level of phone/email support but also visit us from time to time. During the design stage of our central feed system Fleming Plastics took the time to visit us on site then followed through quickly with detailed quotations and drawings.

We have since seen them on regular intervals where we have taken the opportunity to evaluate the performance and function of our system. We were especially impressed with the project manager assigned to us who coordinated an almost perfect installation with almost no interruption to our production.

We are also using DynaCon modular conveyors and Color Exact dosing units supplied by Fleming Plastics Dynamics over the years.

We can happily recommend Fleming Plastics Dynamics for any company looking to forge a close relationship for quality plastics ancillary equipment supply and support.
