

# GRAVIMIX®

## FGB • Handheld

- Multiple languages
- Process display
- Microprocessor-controlled
- 10.5 cm touch-screen
- User friendly
- Password protection

GRAVIMIX, more than 50 designs available!

Dimensions: 230 x 115 x 80 mm

The touch-screen handheld control, FGB-EB/2, is microprocessor-controlled and can be used for either one or several GRAVIMIX systems. This control is easy to operate and is operated with a touch screen and keyboard.

The handheld control allows you to enter and/or read out all relevant data including: machine status, production mode, parameters and material consumption.

The control is provided with a communications port and because of the simplicity there is no printer port available.

The control allows you to enter one recipe plus relevant data per component. After the recipe has been entered, the control can be disconnected and the system will operate autonomously. The control can be used for the entire GRAVIMIX series. The handheld control is ideal as a local control when more GRAVIMIX systems are linked in a network. It allows you to select a recipe from the list of recipes of the central control.

The handheld control makes it possible for anyone to operate a complete high-tech GRAVIMIX system quickly and efficiently. It allows, even during operation, the desired component ratio or percentage to be changed.

*Subject to alterations due to permanent innovation.*
