Power in Plastics

Desiccant Flexible Dryer

Introduction

Drying of plastics raw materials is crucial in the manufacturing of a high quality product. Labotek's drying equipment is based on the aim of ensuring the highest possible levels of reliability, consistency, simplicity and flexibility.

Labotek is manufacturing a wide range of dry air drying systems, depending of the product being dried. Our comprehensive range of desiccant drying units is starting from 100 m³/h and extends up to 8500 m³/h. Drying hoppers are sized from 15 litres up to 12000 litres.

Labotek is offering premium solutions in drying, either as single drying units or large centralised drying system solutions. The philosophy behind Labotek's drying equipment is simple: To achieve continuous drying without costly interruptions to production, made possible through high quality equipment, operating at lowest possible emissions.

Please request our separate energy calculator to find out how little the energy requirements are, for operating a Labotek drying solution.

Desiccant Flexible Dryer 100-450 Series

This series of dryers are the smallest in the Desiccant Flexible Dryer (DFD) series and is targeting the small to medium sized drying requirements and can dry several hygroscopic plastics raw materials simultaneously.

The dryer has a very small footprint, making it ideal for locationing close to the production machinery.

There are 5 sizes in this DFD range: 100, 150, 200, 300 & 450 m³/h. The desiccant dryer is combined with one or several drying hoppers (DH), ranging from 15-2500 litres, depending on application. The DFD dryer up to 200 m³/h is available as stationary or mobile execution.

An airtight interconnecting ducting system is installed between DFD & DH. Dehumidification of the air is made possible through a twin bed desiccant assembly which contains molecular sieve absorption material.

Regeneration of the drying medium takes place in a closed cycle, thus ensuring optimal dew points and lowest possible energy consumption.

A unique "moisture dependent regeneration system", enables the dryer to regenerate the molecular sieves depending on moisture levels being absorbed, therefore the time between bed changes is flexible and dryer is only utilizing the regeneration energy required, or as option by a set dew point.

The range is capable of supplying dew point down to -40°C. The dryer is fitted with either touch screen microprocessor control or Siemens PLC executions, depending on application. 3 Phase blowers and air/air heat exchangers are standard on DFD 100-200 series.

Desiccant Flexible Dryer 100-200

Desiccant Flexible Dryer 300-450 Series

The DFD300-450 series of desiccant dryers is aimed at the medium sized drying requirements and can dry several hygroscopic plastics raw materials simultaneously.

DFD 300-450 has built-in frequency inverter as standard.

The dryer has an extremely small footprint, compared to the air volume achievable. Operating principles are identical to the smaller series, however the DFD 300-450 range is capable of supplying dew point down to -40°C or better.

Technical Data DFD 100-450

Specifications	100	150	200	300	450
Supply of compressed air [bar]	-	-	-	5-8	5-8
Installed power [kW]	5.5	5.5	7.3	10	16
Power consumption, average [kW]	2	3.5	5.5	7	10
Supply Voltage	380/480 V - 50/60 Hz				
Connection fuse [Amp]	16	16	16	32	32
Noise level [dBA]	65		68		
Heating element regeneration [kW]	1 x 3.5	1 x 3.5	1 x 3.5	2 x 3.5	3 x 3.5
Dew point temperature [°C]	Better than -40°C				
Air flow [m³/h], approx.	100	150	200	300	450
Net weight [kg]	180	200	215	300	350
Supply of water cooling [kcal/h]	-	-	-	8200	8200
Cooling water temperature, inlet	20°C (max.)				

DFD	100 - 200	300 - 450
C - Height	1600	1532
B - Width	660	854
E - Depth	720	1203

All Measurements are stated in mm.

Desiccant Flexible Dryer 300-450

Options DFD 100-450

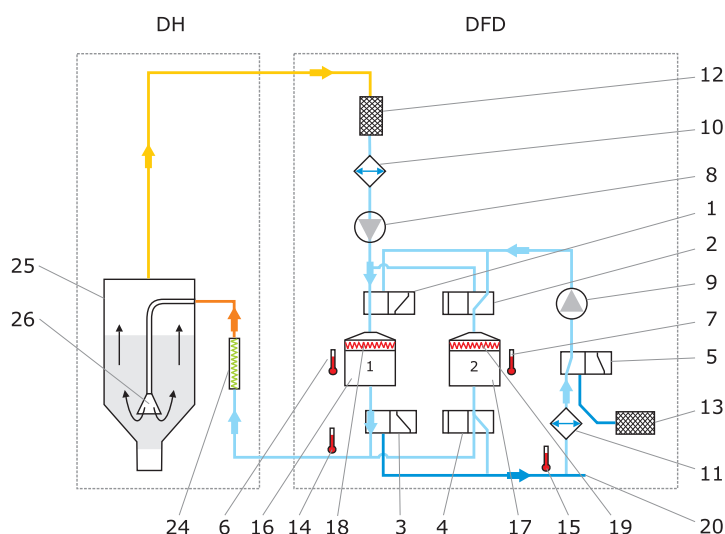

- Ventilation kit for tropical performance, control
- Ventilation kit for tropical performance, complete
- Slide valve monitoring, DFD 300-450
- Dew Point, measuring - DFD
- Volatile trap
- Alarm lamp, DFD 100-450
- Alarm lamp, remote, 10 m cable
- Microswitch for filter cover
- Filter alarm
- Water separator
- Frequency Inverter
- Return air cooler, DFD 100-200
- Process air cooler, DFD 300-450
- Thermostat, cooling water DFD 100-200
- Control, cooling water, DFD 300-450

The DFD 600-1700 range caters for larger drying requirements. There are 4 sizes in this DFD range: 600, 1000, 1500 & 1700 m³/h. The desiccant dryer is combined with one or several drying hoppers (DH), depending on application. This series of dryer is an integral part of Labotek's centralized drying systems.

Labotek's unique "moisture dependent regeneration system", enables the dryer to regenerate the molecular sieves depending on moisture levels being absorbed, therefore the time between bed changes is flexible and dryer is only utilizing the regeneration energy required, or as option by a set dew point.

Desiccant Flexible Dryer 600-1700

Enables to utilize the hot water and transfer into process air, through high efficient air/water heat exchange devices. Depending on the temperature/flow of the water available, considerable electrical power savings can be obtained.

Pos.	Description
1	Inlet slide valve desiccant bed 1

showing multiple desiccant bed assembly.

DFD 4000-8500

The 4000-8500 series of desiccant dryers is targeting the very large drying requirements. The dryer is equipped with multiple desiccant beds (4-6) in order to achieve up to 8500 m³/h of dry air.

The series are among the most energy saving large dryers available, owing to the use of high volume air ventilation blower with very low power consumption. DFD operates at noise levels below >79 dBA.

Drying Hopper

Introduction

The Labotek series of Drying Hopper (DH) are easily connected to the Labotek DFD series via a fixed airtight interconnecting ducting system. A complete standard range of drying hoppers is available from 15-12000 litres, all with interior finish in stainless steel AISI 304. Each drying hopper has individual temperature controller, where desired drying temperature is consistently monitored via solid state relays. All Labotek drying hoppers comes with airtight dry air ducting system, separate over temperature thermostat and standard floor stand.

Alternatively the drying hopper may fit direct in mezzanine construction above processing machine.

Labotek Energy Saving System - LESS

DH 15-800

The DH 15-800 series are supplied with 50 mm insulation, sight glass and exterior finish in stainless steel. Temperature range between 60-140°C as standard, however available in HT versions up to 180°C for PET. DH 200-800 is furthermore supplied with large clean out door as standard.

Drying Hopper 15-800

Drying Hopper 1200-12000

The DH controller is as standard capable of handling Labotek Energy Saving System (LESS) allowing temperature lowering when material has been dried in order to prevent over drying, thus saving energy.

DH control

Airflow regulation valve

Also the control is prepared to handle our optional Air Flow Regulation System (AFRS) where air volume to/from drying hopper is regulated according to consumption. This feature, combined with our optional frequency inverter in the DFD series, enables dramatic reduction in energy consumption.

DH 1200-12000

The DH 1200-12000 series are supplied with 75 mm heavy duty insulation, sight glass & large clean out door and exterior in polished aluminium as standard. Temperature range between 60-100°C as standard, however available in HT versions up to 180°C for PET.

Example Vacuum receiver mounted on DH

DH200-800 lid is equipped with hinged lid and lock as standard

Optional - External Heat Recovery (EHR)

Operates with external hot water, ex from compressor cooling, power utility or other processes in the plant. The EHR enables to utilize the hot water and transfer into process air in Labotek drying systems, through high efficient air/water heat exchange devices.

Energy saving are massive and depending on the temperature/flow of the water available, savings of electrical power up to 85% are achievable.
