

Micro-Scan

Microprocessor Control for Materials Handling Systems

Micro-Scan

Introduction

The Micro-Scan series takes full control of materials handling requirements and enables automatic control of conveying of raw materials up to 8 stations.

The control system is supplied in electrical cabinet and enables great visual appearance of the features.

The Micro-Scan Series offers...

- Microprocessor control with LED status panel
- 3 phase channel blower suited for nonstop operation
- Standard vacuum station from 0.4 kW
- Easy to use, no need for special training
- Prepared for optional proportioning valve
- Comprehensive 3 year warranty, excl. wear parts

Control

A user-friendly microprocessor control shows the current operation status of the system. The Micro-Scan uses pictograms and LED's for simple navigation in menus and easy overview of status. Suction time and line clearing time for optional line cleaning valve are easily set in control display. Ventilation kit is included as standard.

Vacuum blowers

The Labotek Micro-Scan comprises vacuum blower(s) installed as either single, double or even larger executions, depending on the application, to maintain a deep vacuum at the lowest possible airspeed, achieving gentle conditions for the polymer being conveyed. The blowers are maintenance-free and operate below 69 dBa noise level.

Vacuum receivers

Labotek Vacuum Receivers type SVR are supplied in sizes from 1.5 litres up to 200 litres.

The SVR range is made in stainless steel grade AISI

Receivers are modular and allow users to change configuration as the requirements change.

This receiver is among the most flexible available on the market. Level control in receiver is controlled via bottom flap magnet read switch, optionally the receivers may be equipped with high level sensor. The receivers have numerous filter types to select from, such as cartridges, coarse wire screens and others, enabling the receiver to adapt into almost any conveying application.
